

# Priority Queues, Heaps, and Heapsort

Calvin Higgins

Department of Computer Science and Statistics  
University of Rhode Island

October 6, 2025

# Warmup Problem

## When You Enter The Classroom:

- **Program** the following function:

```
int second_largest(int* heap, int n) {  
    // Assume 'heap' is a max-heap.  
    // Assume 'n' >= 3.  
    // TODO: Return the second largest element.  
}
```

- **Analyze** the time complexity:

- Assume an input of size  $n$ .
- Give an asymptotic bound on the time complexity of your algorithm.
- What does your bound mean, in terms of your algorithm(s) runtime?

**Write your group's work on the whiteboards!**

## Begin These Now:

- **Consider attending the review session:**
  - TODO (2:00-2:50PM)
  - TODO (3:00-4:00PM)
  - This Friday at 2:00-4:00PM in Engineering 040
  - Ask your group members if they are going!
- **Create a new project in your IDE for Lab 5**
  - If you aren't sure how to do this
    - Ask a group member
    - Search for documentation
    - Chat with AI
  - If you are still stuck, call over a staff member
- **Work through the lab handout**
  - Available on GitHub under [labs/lab-05](#)
  - <https://github.com/URI-CSC/212-fall-2015>
    - Yes, it is 2015 not 2025
  - All directions available in the lab handout
